## 在Mac下安装Coreseek全文搜索

2013年8月1日 | 分类: [Mac Lion](#), [Mysql](#), [PHP](#) | (91 个脚步) |

看着全文搜索挺火的,所以就在Mac下安装了一下~

**前提:有gcc基础编译环境,安装XCode就具备**

### 1. 设置环境,升级/安装系统基础依赖包

```
sudo bash
su -
```

设置路径和中文环境:

```
export PATH=/usr/local/bin:$PATH
export LC_ALL=zh_CN.UTF-8
export LANG=zh_CN.UTF-8
```

下载并安装系统基础依赖包

```
curl -O -L http://ftp.gnu.org/gnu/m4/m4-1.4.16.tar.gz
tar -xzf m4-1.4.16.tar.gz
cd m4-1.4.16
./configure --prefix=/usr/local
make && make install
cd ..
```

```
curl -O -L
http://ftp.gnu.org/gnu/autoconf/autoconf-2.69.tar.gz
tar -xzf autoconf-2.69.tar.gz
cd autoconf-2.69
./configure --prefix=/usr/local
make && make install
cd ..
```

```
curl -O -L
http://ftp.gnu.org/gnu/automake/automake-1.14.tar.gz
tar xzf automake-1.14.tar.gz
cd automake-1.14
./configure --prefix=/usr/local
make && make install
cd ..
```

## 2. 安装MySQL,提供MySQL数据源支持

- 1). 如果已经安装过mysql,直接跳过
- 2). 通过MySQL 二进制版本(binary,dmg安装包)安装
  - a. 从<http://www.mysql.com/downloads/mysql/>下载当前系统对应的DMG Archive
  - b. 挂载DMG,安装MySQL

## 3. 安装coreseek

```
curl -O -L
http://www.coreseek.cn/uploads/csft/3.2/corese
3.2.14.tar.gz
tar xzvf coreseek-3.2.14.tar.gz
cd coreseek-3.2.14
```

### 安装mmseg

```
cd mmseg-3.2.14
./bootstrap
./configure --prefix=/usr/local/mmseg3
make && make install
cd ..
```

### 安装coreseek

```
cd csft-3.2.14
sh buildconf.sh
./configure --prefix=/usr/local/coreseek --
-without-unixodbc --with-mmseg --with-
mmseg-
includes=/usr/local/mmseg3/include/mmseg/ --
with-mmseg-libs=/usr/local/mmseg3/lib/ --
with-mysql-
includes=/usr/local/mysql/include/ --with-
mysql-libs=/usr/local/mysql/lib
make && make install
cd ..
```

测试mmseg分词,coreseek搜索(需要预先设置好字符集为zh\_CN.UTF-8,确保正确显示中文)

```
cd testpack
cat var/test/test.xml #此时应该正确显示中文
/usr/local/mmseg3/bin/mmseg -d
/usr/local/mmseg3/etc var/test/test.xml
/usr/local/coreseek/bin/indexer -c
```

```
etc/csft.conf --all
/usr/local/coreseek/bin/search -c
etc/csft.conf 网络搜索
```

如果提示 `dyld: Library not loaded: libmysqlclient.18.dylib`  
则需要运行一下

```
sudo ln -s
/usr/local/mysql/lib/libmysqlclient.18.dylib
/usr/lib/libmysqlclient.18.dylib
```

至此,安装coreseek已经全部完成了。

hello

你好。

请问下博主,我按照文章中的过程在make  
mmseg的时候报错如下,能帮忙分析下错误原因和  
解决方法吗? 谢谢。

```
In file included from css/ThesaurusDict.cpp:6:
../src/css/ThesaurusDict.h:12:17: error:
expected namespace name
using namespace __gnu_cxx;
^
css/ThesaurusDict.cpp:79:15: warning: result
of comparison against a string
literal is unspecified (use strncmp instead) [-
Wstring-compare]
if (filename == "-") {
^ ~~~
css/ThesaurusDict.cpp:116:15: warning: result
of comparison against a string
literal is unspecified (use strncmp instead) [-
Wstring-compare]
if (filename != "-") {
```

^ ~~~

2 warnings and 1 error generated.

make  : \*\*\* [ThesaurusDict.lo] Error 1

make: \*\*\* [install-recursive] Error 1

hello 2月26日

1楼

你好。

请问下博主,我按照文章中的过程在make mmseg的时候报错如下,能帮忙分析下错误原因和解决方法吗? 谢谢。

```
In file included from
css/ThesaurusDict.cpp:6:
../src/css/ThesaurusDict.h:12:17:
error: expected namespace name
using namespace __gnu_cxx;
^
css/ThesaurusDict.cpp:79:15:
warning: result of comparison against
a string
literal is unspecified (use strncmp
instead) [-Wstring-compare]
if (filename == "-") {
^ ~~~
css/ThesaurusDict.cpp:116:15:
warning: result of comparison against
a string
literal is unspecified (use strncmp
instead) [-Wstring-compare]
if (filename != "-") {
^ ~~~
2 warnings and 1 error generated.
make  : *** [ThesaurusDict.lo]
Error 1
make: *** [install-recursive] Error 1
```

你试着在src/css/ThesaurusDict.h文件的  
`#include <string>` 后面加入一句  
`#include <ext/hash_map>`  
应该就能编译完成了

shiniv

hello 2月26日 1楼

```
sphinxexpr.cpp:1746:11: error: use of undeclared identifier 'ExprEval'
T val = ExprEval ( this->m_pArg,
tMatch ); // 'this' fixes gcc brain damage
```

第一条error好像是这里

因为新版本编译器的原因,都出现各种错误~~  
打开csft-3.2.14/src/sphinxexpr.cpp  
查找 T val = ExprEval ( this->m\_pArg, tMatch );  
替换成 T val = this->ExprEval ( this->m\_pArg, tMatch );  
all done

PS 我将你上面的那条回复删了点文字~~

  你为何如此厉害。非常感谢,纠结了几天的问题终于解决了。 那条很长的回复也可以删掉了嘛,后面写了error信息了。

大神求解决。。

你试试这样改看能不能编译

csft-4.1/buildconf.sh

查找

&& aclocal \

后加上

&& automake --add-missing \

csft-4.1/configure.ac

查找

AM\_INIT\_AUTOMAKE([-Wall -Werror  
foreign])

改为

AM\_INIT\_AUTOMAKE([-Wall foreign])

查找

AC\_PROG\_RANLIB

后面加上

AM\_PROG\_AR

csft-4.1/src/sphinxexpr.cpp

替换所有

T val = ExprEval ( this->m\_pArg, tMatch );

为

T val = this->ExprEval ( this->m\_pArg, tMatch  
);

3月1日  回复  支持  转发

果子

这次修改后是可以了,但是make&make install的时候出现如下错误:

```

csft-4.1 root#
```

不好意思。。找不出具体原因。。  
你试一下安装个新版的看能不能编译成功  
<http://www.coreseek.cn/uploads/csft/4.0/coreseek-4.1-beta.tar.gz>

3月2日   回复   支持   转发

果子  
我安装的就是最新**4.1bata**版本的。方便给个联系QQ吗?

automake: warning: possible forward-
incompatibility.
automake: At least a source file is in
a subdirectory, but the 'subdir-
objects'
automake: automake option hasn't
been enabled. For now, the
corresponding output
automake: object file(s) will be placed
in the top-level directory. However,
automake: this behaviour will change
in future Automake versions: they
will
automake: unconditionally cause
object files to be placed in the same
subdirectory
```

```
automake: of the corresponding
sources.
automake: You are advised to start
using 'subdir-objects' option
throughout your
automake: project, to avoid future
incompatibilities.

/usr/local/share/automake-
1.14/am/library.am: warning:
'libstemmer.a': linking libraries using
a non-POSIX
/usr/local/share/automake-
```

```
1.14/am/library.am: archiver requires
'AM_PROG_AR' in 'configure.ac'
libstemmer_c/Makefile.am:2: while
processing library 'libstemmer.a'
/usr/local/share/automake-
1.14/am/library.am: warning:
'libsphinx.a': linking libraries using a
non-POSIX
/usr/local/share/automake-
1.14/am/library.am: archiver requires
'AM_PROG_AR' in 'configure.ac'
src/Makefile.am:14: while processing
library 'libsphinx.a'

大神求解决。。
```

把automake版本降低为1.11,就可以了。

```
$ curl -O -L
http://mirrors.kernel.org/gnu/automake/auto
make-1.11.tar.gz
$ tar xzvf automake-1.11.tar.gz
$ cd automake-1.11
$ ./configure --prefix=/usr/local
$ make && make install
```
