Web application with Spring.NET in a virtual directory in IIS

By Alexis Seigneurin on July 17, 2009 5:23 PM | No Comments

If you install a Spring.NET-enabled web application in a virtual directory in IIS, you will get the following error:

```
    The virtual path '/currentcontext.dummy' maps to another application,
which is not allowed
```

This is talked about here and reported here and here.

A workaround is to name your Spring application context as your virtual directory. For instance, with a virtual directory named `pubprep`, you should have:

```
<spring>
    <context name="pubprep" type="Spring.Context.Support.WebApplicationContext,
Spring.Web">
        <!-- ... -->
    </context>
</spring>
```
